

Introducing the newest addition to our Mani•Q colour range.

Each with a faster-than-the-speed-of-LED-light cure time. Over two weeks with no chipping peeling or cracking. And a finish that's as shiny at day fourteen as it is on day one. As with all our Mani•Q colours, the formulas are stable, reliable predictable and abundant. Eight new awesome shades inspired by You! So go ahead, hang eight.

Young Nails LED lamp

LAYNLED	YOUNG NAILS LED LAMP	\$595.00
---------	----------------------	----------

Mani-Q Colour Instructions:

1. Vigorously roll bottle between palms before using. For darker colours, shake bottle if necessary.
2. Prep the natural nail. Remove shine with Young Nails Sponge buffer and clean the natural nail surface with Swipe.
3. Natural nails: Apply Protein Bond only on the free edge.

Enhancement nails: Sand with medium/coarse sanding band, or 150 grit or lower hand file, lightly from cuticle to free edge for a rough finish. Swipe, and then apply Protein Bond on the surface of the enhancement from cuticle to free edge.

4. Apply Mani-Q base coat as thin as possible on four fingers (thumb application is separate), and cure for two minutes under the LED light. Make sure the fingers are on top of the finger placements on the hand plate. Repeat on the other hand. When using a 36 watt lamp, apply all five fingers at a time and cure for two minutes. Remove dispersion layer of Mani Q Base with a dry gel brush to avoid shrinkage.

5. Apply Mani-Q base coat on the thumbs and cure for two minutes under the LED light. The thumbs must be placed so the nail plates face directly up towards the LED bulbs.

6. Thinly apply mani-Q color on four fingers (thumb application is separate), then cure 30 seconds under LED. When using a 36 watt lamp, apply all five fingers at a time and cure for two minutes. Repeat on the other hand.

7. Thinly apply Mani-Q color on the thumbs and cure for 30 seconds under the LED light. The thumbs must be placed so the nail plates face directly up towards the LED bulbs. Cure for two minutes under a 36 watt lamp.

8. Repeat steps 6 and 7 with a second coat of mani-Q color. If desired, do a third coat of Mani-Q color.

9. Apply a thin layer of Mani-Q top coat. Follow curing procedures in steps 6 and 7.

10. Remove the sticky layer with Mani-Q Cleanser.

mani•Q colour.

The formulas for mani•Q colour soak-off gels are stable, reliable, predictable and abundant. Our 18 introductory colour selections are all-time customer favorites recommended by our Mentors (plus base and top coat). mani•Q colours are packaged in an easy-to-use bottle instead of a jar, each with an easy-to-spot color dot on the cap. It's formulated to be both fast and durable, and is equally beautiful over natural nails or enhancements. With our 45-watt LED light, mani•Q colour cures in a zippy 30-seconds (saving the nail tech almost 20 minutes per client.)
